20 JAN | **Kenwood 590 EQ Settings**  
Posted by RD Bentley as [Amateur Radio](#)

## Kenwood 590 EQ Réglages

The Kenwood TS-590S EQ settings will give the user optimum TX audio if properly configured. This transceiver is hard to beat for the money. Some will use the default mode, while others take the benefit of the ARCP-590 [software](#). Follow this and you will have sparkle and articulation.

### TX EQ Settings

- (1) +1
- (2) -6
- (3) -6
- (4) 0
- (5) +2
- (6) +4
- (7-18) +6

### Menu Settings

- (25) 10
- (26) 3,000
- (27) 10
- (28) 3,000
- (30) User
- (31) User

(Mic Gain) 50

It is recommended to use a large-diaphragm microphone into the front of the Kenwood TS-590S. Excellent microphone options: [Electro-Voice RE27N/D Dynamic Cardioid Multipurpose Microphone](#), [Electro Voice RE-20 Cardioid Microphone](#), Heil PR 781, Heil Goldline GM-5, or possibly the [Heil PR-40 Dynamic Studio Recording Microphone](#).

Outboard audio gear is not normally used with the Kenwood 590. The inboard 18 band equalizer provides very suitable TX audio quality. It is important to get the right setup.

All comments are welcome.

### Navigate the Night Sky like Galileo →

[Celestron 21024 FirstScope Telescope](#) --- In 1609, the world-renowned Italian scientist Galileo Galilei discovered celestial wonders hidden in the night sky through his invention of an elementary telescope. ► This simple Newtonian reflector telescope on a rotating tabletop stand makes it easy to view the night sky. To navigate, move the tube in the direction of the object you wish to view, then observe it through the eyepiece. Add the optional FirstScope Accessory Kit and you'll receive an optical finderscope that makes it even easier to locate objects.
